

# ADobe Kuler

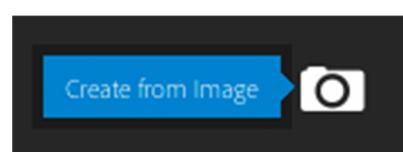

A HEX or Hexadecimal Value, is a combination of 6 number and letters ranging from A-F in letters and 9-0 in numbers. F Being the highest value, 0 being the lowest. The first two numbers or letters represent the shade of red, The second group of two numbers or letters represents the shade of green, and the final two numbers or letters represent the shade of blue.

RGB means red, green, and blue. These are the colors that the eyes see the best and that our eyes use to create more colors. Its is also the name of one of the most used color modes, that uses red green and blue to create more colors.

These five colored circles represent the colors that you have chosen for your palette. You can drag them around on this color wheel to quickly change all of the colors.

The white border on the circle tells the user that that color is the base color. The base color is what the other colors are based off of.

The user can use this button to create a color palette based off of an image that they import.
